The "VTN-PLUS" is a high-end veterinary endoscope for both small and large animals. Combining robustness, precision, and integrated technology, it stands out as an essential tool for demanding veterinarians, whether in the clinic or in the field. Equipped with two internal channels – a 2.8 mm working channel for the introduction of instruments and a dedicated channel for active lens cleaning – it ensures consistent image quality and maximum efficiency during examinations.

Main use:
Gastric and esophageal endoscopy

Multipurpose uses:
Exploration of upper and lower airways
Examination of bladder and uterus
Performing rectal biopsies

Included accessories:
Hard carrying case
64 GB memory card
